Growth Conditions

Recommended Culture Medium	IMDM Medium supplemented with 10% FBS.
Cell Line Revival	Rapidly thaw cells in a 37°C water bath. Transfer contents into a tube containing pre-warmed media. Centrifuge cells and seed into a 25cm ² flask containing pre-warmed media.
Subculture	Cells are cultured as a monolayer at 37°C in a humidified atmosphere with 5% CO ₂ . Cells should be passaged every 3-5 days. Split at 70-80% confluency, approximately 1:10-1:20. Cells may experience a lag period of approximately 1 week before stable growth is achieved.
