Shipping and storage

Store at -80 °C. CRISPRmod CRISPRa Lentiviral sgRNA Controls are shipped on dry ice and should be stored in a -80 °C freezer upon arrival. Edit-R lentiviral particles will remain stable for at least one year without any appreciable loss in titer. When ready to use, thaw the viral particles on ice. The viral titers indicated above for each sample are determined from an aliquot that has been through one freeze-thaw. The vials in this package have not been thawed; therefore, the indicated titers are accurate for the first thaw. However, every subsequent freeze-thaw may result in a decrease in titer of two to five-fold. Any viral particles remaining after the first thaw can be aliquoted into smaller volumes and stored at -80 °C.

Classification of CRISPRmod CRISPRa lentiviral sgRNA controls

CRISPRmod CRISPRa viral particles are not capable of causing permanent disability, life-threatening or fatal disease in otherwise healthy humans or animals, and therefore are not classified as infectious substances under IATA and DOT guidelines.
