

DharmaconTM SMARTvectorTM lentiviral shRNA and shMIMIC microRNA controls

Requirements

25 μ L \times 2 (50 μ L total) of 1×10^8 TU/mL or greater

Itemized list of contents

Lentiviral Particles (net quantity 0.025 mL per vial)

Dry Ice (net quantity 15 kg)

A. SMARTvector con-targeting (NTC) negative controls expressing TurboGFP

Shipping and storage

Store at –80° C. SMARTvector Lentiviral shRNA and shMIMIC microRNA Controls are shipped on dry ice and should be stored in a –80° C freezer upon arrival. SMARTvector lentiviral particles will remain stable for at least one year without any appreciable loss in titer. When ready to use, thaw the viral particles on ice. The viral titers indicated above for each sample are determined from an aliquot that has been through one freeze-thaw. The vials in this package have not been thawed; therefore, the indicated titers are accurate for the first thaw. However, every subsequent freeze-thaw may result in a decrease in titer of two- to five-fold. Any viral particles remaining after the first thaw can be aliquoted into smaller volumes and stored at –80° C.

Classification of SMARTvector lentiviral shRNA controls

SMARTvector viral particles are not capable of causing permanent disability, life-threatening or fatal disease in otherwise healthy humans or animals, and therefore are not classified as infectious substances under IATA and DOT guidelines.

Description of goods

Replication-incompetent, viral-like particles of human, mouse and/or rat origin; intended use is for research purposes only.

Proper packaging and labeling of shipments will be utilized to ensure safe and timely transit of SMARTvector products.
